Work Experience

Integration Engineer

9/2009 - Present Idea2 LLC, Denver, Colorado

- I manage and design the user integration for a hosted, web application for master data management. Responsible for project requirements and managing the deployment of customer provisions. I am responsible for accounting and billing operations. I produce marketing and support documents and oversee the design and execution of these materials. Use extensive software tools to monitor servers, production codebase, website analytics, and customer usage statistics. Responsible for extending live support to customers on a daily basis. I build new software models using a domain-driven design approach in order to merge a customer-based language with a developer-based language.

Project Coordinator

6/2008 - 9/2010 Industrial Luxury Group, Denver, Colorado

- I create value and marketing power for clients using design and brand strategy. My work at Industrial Luxury encompassed a top-down design strategy including branding and image creation, interior branding and architectural space planning, concept presentation and document generation, overall marketing planning and social media strategy, design project management and outsourcing. I developed contract documents and plans for retail and hospitality design. It was my responsibility to manage client and customer relationships, project budgets and financing.

Designer/Project Manager

9/2007 - 6/2008 GALA designs, Denver, Colorado

- Foodservice consultant and designer responsible for producing construction drawings and specifications for commercial restaurant and hospitality projects located nationally. I use AutoCAD 2008, KCL, and AutoQuotes to create detailed kitchen and front-of-house designs and am responsible for the procurement, purchasing and installation of commercial foodservice equipment and fixtures.

Creative Director

1/2003 - 10/2007 WorkingParts, Denver, Colorado

- My duties include design and architectural project management for custom fabrication and construction projects. These include commercial and residential high-end interior space planning and project scheduling to meet strict deadlines and budgets. I oversee vendor relationships, subcontractors and outsourced labor. I am involved daily with customer service, sales and marketing in addition to designing new product concepts and prototypes. This position is challenging in that I have integrated outsourced vendors and subcontractors to create a lean, interdisciplinary design firm which functioned as a combination design/build company with the ability to handle multiple complex projects without large overhead or labor costs.

President/CEO

8/1994 - 12/2002 GOOG Inc., Denver, Colorado

- As one of the founders of this company, I was responsible for the creative direction and overall design directive of one of Denver, Colorado's first custom architectural design and fabrication firms. My duties included building and directing a metal and wood fabrication facility, the production of CAD shop drawings and project estimation and budgeting. In addition, I was responsible for hiring fabrication and design personnel for the company. I also was personally involved with on-site installation and construction for the company and managed the field crews who worked on the various projects the firm handled.

Education

6/1994 University of Colorado, Denver, Colorado

- Bachelor of Electrical Engineering (BSEE)
- Passed the FE Exam for the State of Colorado on July 6, 1994

8/1992 University of Colorado, Colorado Springs, Colorado

- Major: Electrical Engineering Undergraduate Engineering enrollment and general studies in the Electrical Engineering Department . Transferred to U of Colorado-Denver to specialize in Power System Design which is only offered through UC Denver campus.

5/1988 San Francisco Art Institute, San Francisco, California

- Bachelor of Fine Art (BFA) in New Genre and Digital Media with emphasis on the production of digital and electronic media in the visual arts.
